Senior Data Engineer | Google Professional Data Engineer Certificate | 3x GCP | Google Cloud Platform | BigQuery | Airflow | Python | Analytics Engineer | GenAi

Brazil

Summary

I'm a Data Engineer with a degree in Electrical/Computer Engineering from UFPR and an MBA in Business Intelligence.

With over 5 years of hands-on experience in data engineering and analytics, I specialize in building scalable data pipelines, optimizing cloud costs, and delivering data-driven insights that empower strategic decisions. I've helped organizations leverage cloud technologies—especially Google Cloud Platform (GCP)—to turn raw data into actionable business value.

Core Skills:

Data Ingestion: Python, Cloud Functions, Cloud Data Fusion

Data Warehousing: BigQuery, PostgreSQL, SAP HANA, MySQL

ETL/ELT & Transformation: Apache Airflow, SQL, Python

Visualization & BI: Looker, Tableau, Power BI

Cloud Cost Management & Automation: GCP, Jenkins, Git, CI/CD

Others: Web Scraping, Django, Agile/Scrum

Keywords:
Google Cloud Platform · GCP · Data Engineer · BigQuery · Apache Airflow · Cloud Functions · Looker · Data Analytics · ETL · ELT · Python · SQL · CI/CD · Cloud Cost Optimization · Tableau · Data Pipelines · Analytics Engineering · Data Warehousing · Agile · Jenkins · Cloud Automation ·

Check it out my CV on github: https://engrenatera.github.io/cv/

Experience

Grupo Boticário
5 years 11 months

Analytics Engineer - GenAI
December 2025 - Present (11 months)

Analytics Engineer for the area’s Generative AI platform. Design and operate the data backbone that turns agent and LLM traffic into trusted metrics, product insights, and operational visibility.

- GenAI observability: own end-to-end pipelines from ingestion to consumption (Pub/Sub → staging → sensitive-raw → sensitive-trusted → refined), including Gateway logs, prompts/responses metadata, application_logs, tokens, latency, cost, feedback, and failures.

-Analytics engineering: model and maintain BigQuery layers (DDL, stored procedures, naming/governance) for platform metrics, agent-level monitoring (e.g. Ajuda AI / Agentes GB), D-1 reporting, and Looker-ready datasets.

-Trust & quality: apply RLS on sensitive tables, data-quality checks/validators, enrichment, and metadata so product, MLOps, and business teams can use GenAI data safely.

-Product analytics for AI: translate platform events into KPIs that owners can act on (usage, quality signals, cost, adoption) and support root-cause analysis when agents or pipelines misbehave.

-Platform collaboration: partner with GenAI, MLOps, and data platform teams on Gateway contracts, agent instrumentation, orchestration (Airflow), and CI/CD for analytics assets on GCP.

Keywords:
Generative AI · GenAI · Analytics Engineering · LLM Observability · AI Observability · Google Cloud Platform · GCP · BigQuery · SQL · Python · Apache Airflow · Pub/Sub · Cloud Functions · Data Modeling · ETL · ELT · Data

Quality · RLS · Data Governance · Metadata · Looker · Token Usage · Cost Analytics · RAG · Agents · LLMOps · MLOps · Vertex AI · CI/CD · Git

Data Engineer Specialist
January 2025 - December 2025 (1 year)
Remote

- Cloud Cost Management: Analyze, monitor, and optimize Google Cloud Platform (GCP) resource utilization and spending.
- Data Pipeline Development: Design and implement cost-efficient ETL/ELT pipelines on GCP.
- Cost Analytics: Build dashboards and reports to track cloud usage and spending trends using tools like Looker, BigQuery or Tableau.
-Automation and Tools: Helping to create tools to automate cost forecasting, anomaly detection, and optimization workflows.
-Performance Tuning: Optimize the performance and cost of GCP services such as Cloud Storage and batch data running in procedure.
-Ad Hoc Analysis: Conduct root-cause analysis of unexpected cost fluctuations and create solutions to mitigate future occurrences.

Keywords: GCP, Google Cloud, Cost Optimization, Data Engineer, Cloud Cost Management, Data Analysis, Automation, BigQuery, Dataflow, Cloud Storage, Anomaly Detection, Tableau, Looker, Analytic Engineer.

Data Engineer
October 2022 - January 2025 (2 years 4 months)

- Developing and maintaining code and documentation for ETL and other data integratio projects and procedures

- Analyze and create new raw, trusted and refined pipeline data

- Working large data sets, including data warehouse technical architectures, ETL/ELT and reporting/analytic tools

- Evaluate business needs and objectives

- Conduct complex data analysis and report on results

- Build dashboard in Tableau and Looker

- Build algorithms and prototypes

- Combine raw information from different sources.

Key words: GCP, Google Cloud, Airflow, SQL, Python, Looker, Tableau, Procedure, Cloud Function, batch, git, scrum, agile, SAP, Cortex, SLT, API

MIS and Performance Analyst |||
September 2021 - October 2022 (1 year 2 months)

Analytical Engineer Project

Knowledge in: SQL, Multidimensional Data Modeling, DataViz tool (PowerBI, QlickView and Tableau), Python and cloud service (GCP)

Experience with external data acquisition with integration via Web Scraping.

Data Analyst
December 2020 - September 2021 (10 months)

- Automation of routines in Python programming language
- Data visualization and storytelling with data
- Dashboard developer in Power BI
- Data modeling and data science
- Fraud prevention and detection analyst
- BI specialist

Lyon Tech
Analytics Engineer - Founder
December 2019 - Present (6 years 11 months)

Data and BI Consultant

https://lyontech.com.br/

@_lyontech

TRUE WORK Consultoria e Desenvolvimento de Sistemas
1 year 10 months

SW Developer for Embedded Systems
April 2020 - December 2020 (9 months)

Development of software and update firmware for Embedded System

Development of Business Intelligence Dashboard (Power BI)

Analytics BI for IoT Embedded Systems Design

Development of database routines, task automation and firmware fault correction (Python)

PL Programmer
November 2019 - April 2020 (6 months)
Curitiba, Paraná, Brazil

Junior Programmer
July 2019 - November 2019 (5 months)
Curitiba

Intern - R&D Project
March 2019 - June 2019 (4 months)

Huawei Technologies
Intern - Telecommunication's Project
March 2017 - February 2018 (1 year)
Curitiba

Acting on RF solution to implement new technologies 3G and 4G;

Working with TIM's Team;

Give support to the supplier to find the best solution;

Give support to the project's team;

2x Awards Best Trainee;

Recommendation letter.

Lactec
Intern and fellowship - Research Project
March 2016 - March 2017 (1 year 1 month)

Project: Selection of portfolios of wind projects

- Development of optimization algorithm through mathematical simulation software;

- Study of the Brazilian wind potential and selection of critical points;

- Selection of project portfolios based on the PSO optimization technique;

Project: Accelerated aging tests of electronic meters

- Study of reliability engineering applied to electronic meters;

- Acquisition of data of the measured ones under stress;

EMJEL - Assessoria em Eletroeletrônica
Volunter Work
October 2015 - February 2017 (1 year 5 months)
UFPR

JUNIOR ELECTRICAL ENGINEERING COMPANY

Ambev

Intern - Administrative Financial

December 2014 - November 2015 (1 year)

Rua Getúlio Vargas

Education
